Assignment 3

By Paula Pino, CPS393-2

2. MariaDB [pino]> SELECT count(*) FROM vets where trim(state) = state;
Resulted in 82 counts, which I think means that only 82 of the many state entries matches its trimmed counterpart, meaning that all the other states listed have spaces before/after the name of the state.

3. MariaDB [pino]> DELETE FROM vets WHERE lname = '' OR lname IS NULL;

Apparently 82 rows were affected, so all the entries from the previous step must have been completely blank, all the states listed must have spaces before/after the name.

4. UPDATE vets SET state = TRIM(state);

Rows matched: 58170 Changed: 58170, so every entry has now been modified to include the trimmed state names. I ran the count query from step 2 again and got a count of 58170, so there are no states without trimmed names now.

5. UPDATE vets SET lname = TRIM (lname) ;

UPDATE vets SET fname = TRIM(fname);

UPDATE vets SET town = TRIM(town);

58170 entries were updated for all of these, success!

6. SELECT COUNT(town) FROM vets WHERE town LIKE 'LOS %'; = 581 counts

but SELECT COUNT(town) FROM vets WHERE town LIKE 'LOS %'; = only 15 counts

so most of those initial entries are duplicates (and now I know about the ‘distinct’ qualifier!)

7. SELECT COUNT(town) FROM vets WHERE town LIKE 'LOS ANGELES'; = 538 counts

SELECT COUNT(town) FROM vets WHERE town LIKE 'LOS %' AND town != 'LOS ANGELES';
resulted in 43 counts

8. SELECT state, COUNT(*) as Count FROM vets WHERE town LIKE 'LOS %' AND town != 'LOS ANGELES' GROUP BY state;

results in: CA 34, NM 6, TX 3.
9. SELECT * FROM vets WHERE state = 'GU' ORDER BY lname;
output a set of 70 rows in alphabetical order by last name.

10. create table States(State varchar(30), Abbreviation varchar(10) primary key);

Problem: the state names and abbreviations are long due to spaces since this table's data haven't been trimmed and updated.
